Multiple-Choice Quiz - Photosynthesis

Target age: 13-17 years

Q1. [Difficulty: Easy]
What is the primary purpose of photosynthesis?

A) To break down glucose for energy

B) To convert light energy into chemical energy stored in organic molecules

C) To absorb carbon dioxide and release nitrogen gas

D) To produce chlorophyll for the plant

✔ Correct Answer: B

Explanation: Photosynthesis transforms light energy into chemical energy (mainly glucose). Option A describes respiration, C is incorrect because oxygen-not nitrogen-is released, and D confuses pigment production with the overall process.
